Personale marittimo 2050

New Skills

New skills will be required to maximise the benefits of a fully integrated logistics supply chain. These skills will include:

- Big data management
- Big data analytics
- Automated operation and maintenance (O&M)
- Management of complex service constructs
- Management of data belts to keep them safe from cyber attacks and maintain its integrity

Ship operations will be conducted partially or entirely onshore and remotely manned by personnel with doctorate degrees
